EXPERIENCE

AI Platform Engineering Intern

May 2026 – Dec 2026

Nokia

Toronto, ON

- Enabled 15+ engineering teams to build and deploy enterprise AI agents by architecting an end-to-end agent platform, spanning agent life-cycle, memory, RAG, guardrails, and evaluation across GCP, AWS, Azure, and on-prem, with the platform selected for demonstration at NVIDIA GTC 2027
- Cut LLM evaluation setup time from 5 days to 2 hours, by engineering a standardized evaluation framework with 6+ LLM-as-judge metrics across multi-cloud and on-prem deployments
- Authored 30+ Architecture Decision Records covering AI gateway architecture, Kubernetes, IAM, secrets, and observability (Prometheus/Grafana), driving technical alignment across diverse engineering teams
- Automated releases for 8+ containerized services across GCP, AWS, Azure, and on-prem, eliminating environment-specific deployment workflows through reusable backend adapters
- Demonstrated platform readiness through live enterprise agent demos, deploying client-built agents using platform configured memory, guardrails, and orchestration for Senior VP level leadership, supporting adoption decision
- Accelerated platform capability development by collaborating directly with Microsoft and Google engineering teams to evaluate and adopt partner implementation patterns for memory, guardrails, tool calling...

Software Engineer – Business Solutions

July 2025 - Sept 2025

African Foodways Market

Winnipeg, MB

- Led end-to-end development of a store operations platform across 3 stores, by translating stakeholder workflows into technical requirements, eliminating inventory and catalog failures across day-to-day operations.
- Eliminated stock inconsistencies across 250+ products by leveraging a normalized SQLite database with relational constraints and input validation, creating a single source of truth for product and inventory records
- Improved application reliability across 200+ monthly interactions by resolving state synchronization and API integration issues in React and Flask workflows, reducing user-facing errors

PROJECTS

Platter: AI-Powered Nutrition Platform | AWS, Redis, PostgreSQL, LangGraph, FastAPI, OpenCV

- Built an AI-assisted nutrition app, turning meal images and user health goals into personalized insights and meal recommendations, simplifying meal tracking for a growing user base
- Improved the consistency and relevance of meal insights by designing a multimodal LangGraph pipeline; leveraging visual context, LLM reasoning, RAG over 8,000+ nutritional records, and user preferences
- Enhanced system scalability and reliability by separating compute-intensive inference from core services through containerized services deployed with Docker, Kubernetes, and AWS
- Enabled adaptive recommendations by learning from dietary preferences, meal history, and user feedback persisted across Redis and PostgreSQL.

Nitrogen Dioxide Level Forecasting | Python, GCP, TensorFlow, Numpy, Pandas

- Forecasted nitrogen dioxide concentrations with 91% prediction accuracy by developing LSTM neural networks in TensorFlow on geospatial time-series data
- Enabled large-scale geospatial analysis by processing satellite imagery through Google Earth Engine on GCP to extract spatial and temporal pollution trends

EDUCATION

Carleton University

Ottawa, ON

Bachelor of Computer Science, AI & ML, Co-op

GPA: 3.9/4.0 | Expected: May 2029

- Carleton Quantum Computing (Exec.)

TECHNICAL SKILLS

Languages: Python, Go, Java, C, C++, JavaScript, TypeScript, SQL, Bash

AI / ML: LangGraph, RAG, Vector DB, PyTorch, TensorFlow, Pandas, Numpy, Scikit-learn

Cloud / Infra: AWS, GCP, Azure, Docker, Kubernetes, K9s, OpenStack, Linux, Gitlab, GitHub Actions, CI/CD

Frameworks / Tools: FastAPI, Flask, React, Prometheus, Grafana, OpenTelemetry, Redis, Kafka
